# Information for Authors

## 1 Submission of Manuscripts

Manuscripts in English may be submitted to the Editor-in-Chief,

DR. BERNARD MELTZER  
Department of Computational Logic  
School of Artificial Intelligence  
University of Edinburgh  
9, Hope Park Square, Meadow Lane  
Edinburgh EH8 9NW, Scotland

or to the Associate Editor,

DR. BERTRAM RAPHAEL  
Stanford Research Institute  
333 Ravenswood Avenue  
Menlo Park, California 94025, U.S.A.

## 2 Form of Manuscripts

Please type your manuscript on good-quality bond paper of uniform size (preferably 8½ by 11 inches) using one side of the paper only and double spacing throughout. Submit the original and two copies, and retain one other copy.

All illustrations, photographs, tables, etc., should be on separate sheets, and should be included in each copy. Each page of the manuscript should be numbered.

Give your full names, academic or professional affiliations, and the complete address of the author to whom proofs and correspondence are to be sent. If the main title of the paper exceeds 50 characters, including spaces between words, include an abbreviated title on the first page of the manuscript for use as a running head.

**SPELLING:** Webster's New International Dictionary of the English Language, Unabridged Edition, should be consulted for all questions of spelling and style.

## 3 Organization of the Paper

**HEADING.** The title of the paper should be concise and informative. Successive lines should give the author's name, academic or professional affiliation, and address.

**ABSTRACT.** Every manuscript must contain a concise abstract, no more than 150 words.

**ACKNOWLEDGMENTS.** This section includes acknowledgments of help from associates, permission to publish, and financial support.

**REFERENCES.** See detailed instructions in Section 14.

## 4 Cross References

If cross references are necessary, number the section of the paper and cite cross references by section number, e.g., "see Section 1.2." Avoid citing page numbers.

## 5 Illustrations

All illustrations should be submitted in duplicate in a form suitable for reproduction, preferably of such a size that the same degree of reduction (for example, ¾ the original size) can be applied to all of them; they should not exceed 8 by 10 inches. Number the illustrations according to the sequence of their appearance in the text, where they are to be referred to as "Fig. 1," "Fig. 2," etc. Each illustration must have a legend. These legends should be typed (double spaced) on a separate page. Prefix each legend with the number of the illustration to which it refers.

Lettering should be done professionally with a Leroy ruler.

Photographs should be glossy prints.

The author's name and figure number should be indicated on the back of each illustration.

*The third copy of the manuscript* may have xeroxed or comparably copied line drawings, but photographs should be provided for this copy so that it may be used by reviewers.

## 6 Literature Citations

In the text, follow the rules implied in these examples, enclosing the reference number, etc., in brackets after the author's name: Stuart [00] demonstrated . . . as shown by Burke and Wills [00] . . . Eyre [00], pp. 12-16 found . . . In several early studies (Bass and Flinders [00], p. 7; [00], p. 30) we suggested . . .

For more than two authors use: Blaxland et al. [00] discovered . . .

For personal communications, which will be set as footnotes, use, for example: J. Atherton, personal communication, 1968.

## Information for Authors (*continued*)

### 7 Tables

Tables should be typed on separate pages, and numbered with Roman numerals according to their sequence in the text. Column headings should be short and self-explanatory. A brief title should be given above each table, and any footnotes below (see Section 9).

### 8 Headings

The following sequence of headings should be used: Capitals at the margin, italics at the margin, italics at the margin indented, italics in the line. If a further subdivision is needed below the level of the fourth heading, use (1), (2), etc., and (a), (b), etc.

### 9 Footnotes

In the text, footnotes should be used only when essential. They should be consecutively numbered throughout with superscript arabic numerals. The texts of the footnotes should be gathered on a separate page at the end of the manuscript.

In tables, footnotes are usually preferable to long explanations in the headings or body of the table. They should be placed under the table and indicated by superscript lower case italic letters.

### 10 Symbols and Abbreviations

Please use widely accepted symbols and forms of abbreviation. The system given in *The Style Manual of the American Institute of Physics* is recommended. If there is any doubt in your mind about a particular symbol or abbreviation, the first time it appears in the text, give the full expression followed by the abbreviation.

### 11 Mathematics

Mathematical expressions and equations should be typewritten whenever possible, with all symbols aligned as they are to appear in print. If longhand must be used, great care must be given to legibility. Greek letters and other special symbols must be identified in the left-hand margin the first time they appear. Also, distinguish carefully between one and ell, zero and upper and lower case oh, letter t and Greek tau, plus sign and dagger, etc.

Vectors will be set in bold face and should be indicated in the manuscript by underlining with a wavy line.

Equations should be numbered serially on the right-hand side by arabic numerals in parentheses. Only equations explicitly referred to in the text should be numbered.

### 12 Computer Languages

These should be in small capitals, LISP, CPL, ALGOL, POP-2, IPL-V, AED, etc. Please indicate computer languages by double underlining.

### 13 Computer Instructions

As far as possible use bold (indicated by wavy line underneath) for syntax words, roman for comments, and italic (straight underline) for everything else.

### 14 References

All literature citations should be collected in a list at the end of the paper and numbered in the order in which they are cited in the text. Retain the original title for publications in languages using the Roman alphabet. However, those employing Cyrillic and other non-Roman alphabets should be transliterated. Please note the original language at the end, e.g., "(in Russian)."

Titles of journals should be abbreviated in conformity with those given in the ACM publication, *Computing Reviews*, July 1969, pp. 351-356. If you do not have this issue available, please give the names of the journals in full and North-Holland will abbreviate them.

Please follow the style below:

Citations (1) *References to items in periodicals*: These should take the form: author, title, journal, volume number, date, pages. For authors, last names are given first, even for multiple authors; likewise for editors with the name followed by: (Ed.). The author's name always ends with a period, either the period which is the abbreviation for his initial, or a period for the purpose. The title has only the first word and proper names (or their derivatives) starting with capital letters, and it ends with a period. The date is given in parentheses. Example:  
00. Jones, R. W. Marks, F. M., and Anthony, T. Programming routines

## Information for Authors (*continued*)

for Boolean functions. *J. ACM* 5 (May, 1960), 5-19.

(2) *References to reports or proceedings*: Author(s) name(s) and title (same style as above), report number, source including date and pages.

(3) *References to books*: Author(s) (same style as to periodicals). Title—all principal words start with a capital letter, and the title is underlined so that it will be set in italics—publisher, city, year. Page or chapter references follow the year.

(4) *In lengthy bibliographies*, entries must be arranged alphabetically according to authors' or editors' names, or by publishing organizations for items to which no names can be attached.

### 15 Proofreading

Authors will be responsible for proofreading. Galley proofs will be sent to authors, and should be returned to the publisher within three working days. No new material may be inserted in the

text at the time of proofreading, except when advance permission has been obtained from the Editor-in-Chief or the Associate Editor. Be sure to answer all queries entered on the manuscript by the publisher's copy editor.

The addition or deletion of one word may necessitate resetting several lines, or even a page or more. If it is necessary to add a word, try to delete another or several with about the same number of letters. Make all corrections in the margin, placing in the text only the marks required to indicate where the correction is to be made. In the margin, mark all printer's errors "P.E."

### 16 Reprints

A total of 25 reprints without covers will be provided free of charge to the senior author of each contribution.

Additional copies may be ordered at charges shown on the reprint price list that is sent to the author.
